

## Colocation Services

### Customers have complete control over their equipment

#### Service Overview

Reliance Globalcom provides customers with an ideal environment for their colocation needs. Customers have the ability to install and operate their own IT and telecom equipment in state-of-the-art data centers with the benefit of security and environmentally conditioned rack space for optimum equipment performance.

Our services are designed to offer customers with complete control over their equipment, which can be managed remotely through various connectivity options, our Safe Hands Service, or by physically visiting the data centers.

#### Key Attributes

##### State-Of-The-Art-Facilities

Our facilities offer an environment for ultra reliable operations with multiple layers of power supply including dual main feeders, dual UPS, backup generators, fire suppression systems, raised floors, HVAC, humidity control and multiple levels of physical security. Authorized personnel can access the data centers on a 24x7x365 basis.

##### Connectivity

Our colocation service is integrated with our global Ethernet-based network and complements our suite of fully-managed Ethernet services. With points of presence (POPs) in the world's major metropolitan areas, we provide customers the ability to gain access to a wide range of global communication services. Our services are available up to 1 gigabit/second and support worldwide delivery of mission-critical traffic. Reliance Globalcom offers customers flexible, reliable and highly scalable service.

#### Coverage

We offer customer access to centers situated in major business locations in the US, Europe and Asia. Our colocation service gives customers the opportunity to select the site nearest to their locations, allowing them to get to new markets and expand their international reach. For the latest service availability please check with your Account Manager.

#### Scalability

Our service provides customers with the scale to support growing business needs. Additional space, power, and bandwidth needs can be fulfilled within days.
