

Reliance Globalcom **Global Ethernet VPLS**

Create a simpler WAN with full-mesh connectivity for free-flowing, collaborative work with the simplicity of Ethernet. Reliance Globalcom's Global Ethernet VPLS service helps you take your network to the next level with an easy upgrade. Connect your offices worldwide with the control and feel of a LAN.

Reliance Globalcom's Global Ethernet VPLS service is an MPLS based Layer 2 service that allows geographically dispersed sites to share a single broadcast domain while appearing on the same virtual LAN.

It enables you to create a single next generation, multi-service WAN which can transport voice, video, data traffic reliably and economically.

By deploying VPLS over an MPLS-based network core, Reliance Globalcom has created a best-of-breed approach that provides the reliability, security and ease-of-use of Ethernet along with the scalability, any-to-any support, resiliency and QoS features of MPLS.

- A Layer 2 service involves simpler ubiquitous Ethernet ports which exist in every LAN today
- With multiple Classes of Service (CoS) to support the service performance required for various applications
- Flexible port and CoS bandwidth options from 1 Mbps to 1 Gbps
- Retain control of WAN routing without exchanging the routing information with the carrier
- The choice of using any routing protocol including non IP- based (IPX, AppleTalk)

Simplicity

Use existing Ethernet network set-up and skill set to extend to the WAN.

Network Resilience

Reliance Globalcom's state-of-the-art network deploys equipment and is engineered for zero congestion with redundancy and capacity to ensure the most optimal performance.

Flexible Charging Options

While most of the competitive offerings require committed bandwidth; Reliance Globalcom's VPLS service offers a usage-based capability.

Robust Delivery System

Service delivery and assurance supported by highly skilled and experienced professionals backed by strong Service Level Guarantees.

Each order is managed by a single point of contact for a focused and personalised approach.

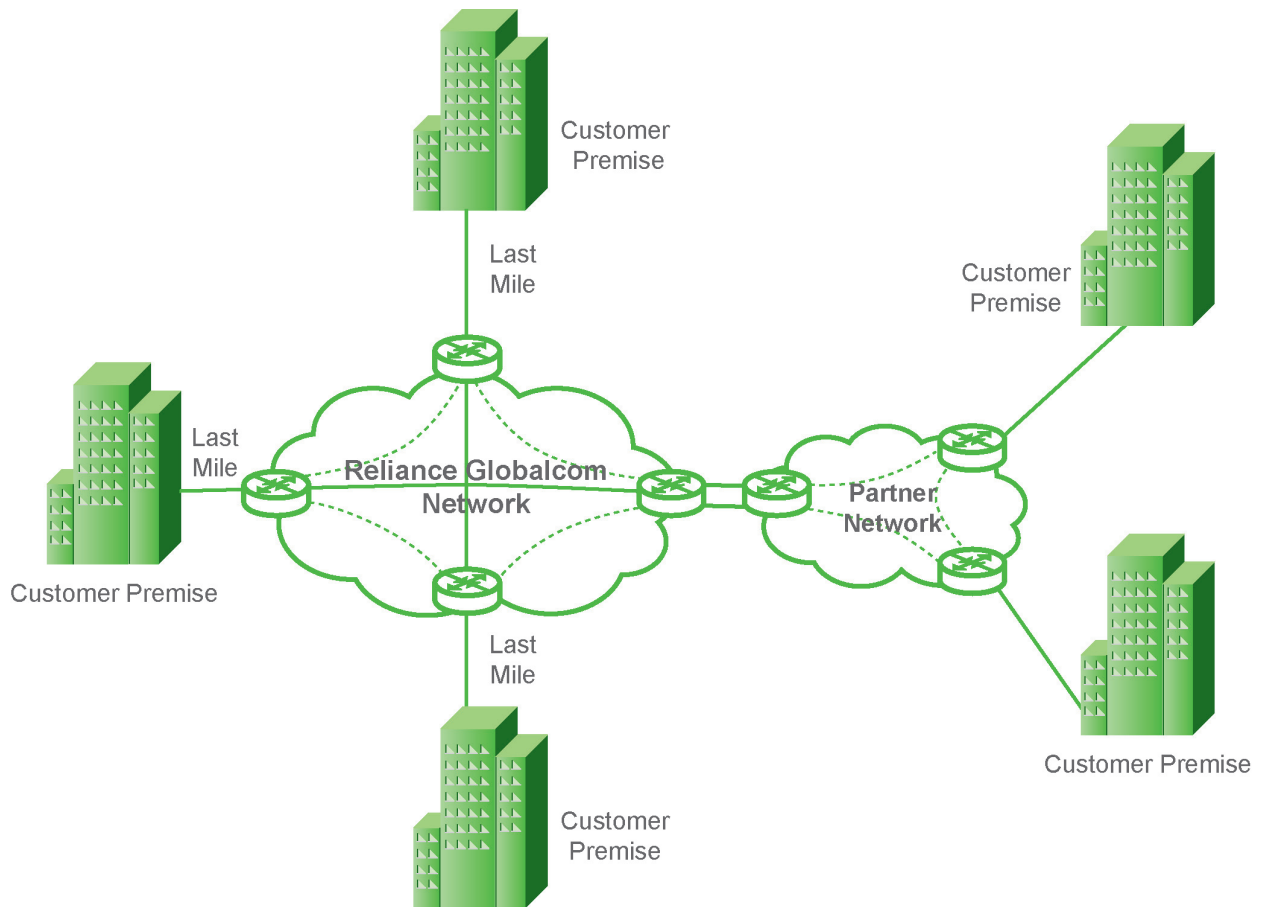

A Global Service

Reliance Globalcom Global Ethernet VPLS services are available between all the major business destinations in Europe, USA, Asia including developing markets like India and the Middle East. With a suitable combination of mesh and point-to-point Ethernet offering a one-stop shop connectivity solution to over 36 countries globally with deep in-country footprint.

Key Features

- Ethernet over MPLS
- Fully meshed any-to-any topology Layer 2 service
- Supports up to four Classes of Service (CoS)
 - Real Time
 - Business Critical
 - Business Data
 - Business Standard
- Bandwidth granularity as low as 1 Mbps
- Easy-to-use web based reporting tools
- Maximum MTU offered is 4474* bytes
- Burst above CIR
- SLAs on service availability, installation time, RTD, packet delivery and jitter (depending on CoS)

* May be constrained by access provider capabilities

Consolidate your network with GE VPLS from Reliance Globalcom

- Retain control of your network. No sharing of routing tables.
- Use existing skill sets of your IT managing the LAN to manage the WAN as well.
- Do not lock your investments by committing to bandwidths that may lie idle today. Invest only in what you need and pay only as you use and grow.
- Take advantage of easy network upgrades or addition of sites with minimal service disruption.
- Do not be restricted by routing protocols. This is a protocol agnostic service, transparent to higher level protocols.
- The GE VPLS architecture from Reliance Globalcom brings scalability, efficiency, and operational consistency in delivering business-class services to its customers.
